

SPRINT BOOK LINE

The most innovative book finishing system available. Combining unique capabilities like single web expandable to multi-web, patented clear channel register control, inline or near line operation, durability for increased “up time” and customization to fit every application.

SAVE BOOKS FASTER!

The VITS Sprint Book Line utilizes patented clear channel register control to quickly synchronize the cut to the book in one signature. This translates into less waste and more productivity.

TO GLUE OR NOT TO GLUE?

Avoid the mess and cost of gluing the book block. The Sprint book line can deliver a stacked book block directly into the perfect binder, without glue. Of course, if gluing is required the Sprint Book Line can do that too.

NEVER STOP THE LINE

With the addition of an in-register splicer, the line never has to stop. Simply splice roll to roll, in register and on the run to maximize productivity and throughput.

EXCLUSIVE FEATURES

Rated Mechanical Speed	1,200 fpm / 365 m/min
Production Speed	BPH Dependent on Format
Control Technology	Bosch Rexroth
Print to Cut Accuracy	+/- .010" / .25 mm
